City of Englewood Utilities Department Needs High Resolution Imagery

SUMMARY: City of Englewood Utilities Department needs high resolution imagery to enhance their GIS departments data sets. Their goal is to supplement highly accurate GPS field data with current imagery to produce better maps.

THE PROBLEM: Typical “off the shelf” imagery is low resolution and often does not reflect the pace of growth the City of Englewood is experiencing.

THE SOLUTION: By investing in the development of a City run UAV (Drone Program), FAA Certified City staff can deploy, collect, and process imagery on a as needed basis. DroneDeploy web-based software provides a solution for the mission planning, image stitching (Orthomosaics) and exporting of imagery-based data sets into GIS.
